

ICES DAILY BATCH START-UP (SCHID=1)

FREQUENCY

This schedule contains those jobs which take change accumulations of ICES databases. It also includes the daily reference table processing and the initialization of those BTQs which are used only by the on-line system. There is a dummy job - CEPIMEND - which indicates that the CEPSTART schedule is complete. CEPIMEND is triggered by CEPSTART and is dependent upon the last job in each leg of the schedule. Please review the flow diagram for the complete list of jobs in this schedule.
